Methodology

Period and source

Dated FPDS Award actions in completed FY 2025 and FY 2026, all locations, selected by signed date (UTC). Latest matched dates: 2025-09-30 and 2026-09-30. Federal fiscal years start October 1. IDVs and Other Transactions are excluded.

Only the two selected years are queried. Consecutive years are year-over-year; a gap is an endpoint comparison, not annualized.

Funding and amounts

Use the reported funding/requesting agency code, not the awarding office or department roll-up. A code uses its latest nonblank name in the selected years. Unclassified funding is included in the overall total, not the agency rankings.

Net obligations are signed cents including deobligations, not payments or contract ceilings. Missing amounts stay missing and are not replaced by zero.

Dollar and percentage comparisons

Subtract the earlier net from the later net when both amounts are reported. Percentage is that difference divided by the earlier net, times 100, only when the earlier amount is positive. A zero or negative baseline still allows dollar change.

The PDF shows up to 10 increases and 10 decreases by dollar change (ties by code), and up to 15 nonpositive baselines by absolute dollar change. A dash indicates an unavailable comparison.

Reproduce the result

Queried at 2026-11-19T18:10:13+00:00. The ZIP includes the exact executed SELECT and a CSV with all codes, both year totals and counts, and comparison status. Import funding codes as text to retain leading zeros. Use GETWAB FPDS Query to rerun the SELECT.

Conclusions

Analyst commentary / static archive sample

What the data shows

The national increase of $27.29 billion masks significant offsets. CBP rose by $29.13 billion while the Navy fell by $24.90 billion. The biggest increase exceeding the national net change is consistent with declines elsewhere—not an arithmetic error.

How to use the result

Use dollar differences to evaluate absolute exposure, and use relative changes only with a positive, comparable baseline. The separate missing and nonpositive categories keep percentage rankings from exaggerating small or negative starting points. The figures do not establish why obligations moved.
