Methodology

Period and source

FPDS Award actions signed in completed FY 2025 and FY 2026 (October 1 to September 30). Latest matched signed dates: 2025-09-30 and 2026-09-30.

Only those two fiscal years are queried. Consecutive years give a year-over-year change; a gap gives an endpoint change, not an annualized rate. Closed fiscal years can still be revised. IDVs and Other Transactions are excluded.

Place of performance

A ranked record needs the reported primary country USA and one of the 50 state codes. This is not the supplier address. The outside subtotal includes DC, territories, military mail, other reported countries and unmatched geography.

Amounts and change

Sum signed obligated amounts in integer cents, including deobligations; this is not outlays or contract ceilings. A missing yearly amount is not zero and yields no change for that state.

Dollar change equals later net minus earlier net. Percentage change equals dollar change divided by earlier net, times 100, and appears only for a positive baseline and reported amounts in both years. A dash indicates unavailable; it is not zero.

States with amounts in both years sort by dollar change, largest first, with ties broken by state code. All 50 states are shown.

Reproduce the report

Conclusions

Analyst commentary / static archive sample

What the data shows

The comparable 50-state net rose $30.04 billion, of which Texas accounted for $18.28 billion of net increase. The national state aggregate therefore conceals substantial differences across the map. Increases in one state can coexist with meaningful declines elsewhere.

How to use the result

All 50 states had reported amounts in both years, but the state-to-state comparison still does not establish causation. Follow the largest movements into underlying signed actions and agencies before attributing a change to market growth, new awards or relocated work.
