Disclosure Statement

This report uses publicly available data from the Federal Procurement Data System (FPDS). It is intended for informational and analytical purposes.

At a glance

Selected cohort: NAICS 541512.

$63,564,578,820.17 in net obligations across 70,973 reported award actions.

PSC and NAICS totals, observed classification pairs, buyers, and suppliers are separate views of the same actions. Do not add the tables together.

Methodology

Source and coverage

FPDS Award actions in GETWAB's FPDS dataset. Actions without a usable signed date or obligation amount are excluded. Queried on November 19, 2026; latest signed date in the selected scope: September 30, 2026. This is not a completeness or refresh date.

Parameters

Market: 541512 (exact principal NAICS). The other code is observed on the same FPDS action; it is not a second filter.

Awarding agency: Any. If set, it matches the recorded contracting agency, not the funder.

Start fiscal year: FY 2025. End fiscal year: FY 2026. Both endpoints are included. Fiscal years are assigned by signed date and run from October 1 to September 30. An open fiscal year is partial.

Layout: Portrait. This changes the page format, not the data.

Metrics and limits

Net obligations add the signed award-action amounts, including negative adjustments. They are not cash outlays or award ceilings. Actions count reported transactions, not distinct contracts.

One cohort supplies every table. Signed action obligations are converted to cents before summing. The fiscal-year rows show observed years; open years are partial.

The crosswalk shows pairs of PSC and principal NAICS recorded on matching actions, not a prescribed relationship between the classifications. Do not add different tables together.

Ranks use net obligations. Each ranking shows up to 10 identified rows, plus other and missing-code buckets when present. Suppliers are grouped by reported recipient UEI, not corporate parent. Awards without a usable code are included in the market totals.

Reproduce the results

Open SFPR-PSC-COLL-1.sql in the accompanying ZIP (also available as a separate download). Run the labeled SELECT statements one at a time in FPDS Query. Confirm the signed-date and scope filters before comparing the result. Reruns against newly updated FPDS data may differ.

The SQL returns a market total and named projections. Its net_cents column is in cents; the PDF's Other rows are the totals less the displayed and missing-code groups.

Conclusions

Analyst commentary / static archive sample

What the data shows

The selected market contained $63.56 billion in net obligations across 70,973 actions and 352 observed PSCs. DA01 alone reported $23.56 billion, about 37% of the total, so the aggregate market is not a uniform mix of services.

How to use the result

Use the observed crosswalk to discover adjacent codes and then verify them in actual records. Use the awarding agency ranking to find contracting activity, not necessarily sources of funds. The market total includes signed adjustments; code pairings are not official one-to-one classifications.

About this example

This fixed public sample uses an actual GETWAB report snapshot dated 2026-11-19. The commentary was written for this example without a runtime model. Reusable SQL and supporting tables are provided with an ordered report, not with this preview.
