Methodology

Source and scope

FPDS Award actions signed in FY 2025 through FY 2026, inclusive, through 2026-11-19 (UTC). Federal fiscal years start October 1. IDVs and Other Transactions are excluded.

Awarding agency: 3600; principal NAICS: 541512. Filters are exact and combined with AND. Awarding agency means the contracting-office agency, not the funder.

Net obligations and distinct awards

Sum signed obligation amounts in cents, including deobligations. Net obligations are not payments or contract ceilings. Missing amounts are not reported zeros.

An award identity includes award agency and PIID, plus referenced vehicle agency and PIID. Actions without an award agency or PIID are omitted from distinct counts, but still count as actions. An award appearing under multiple PSCs is counted once in the scope total.

Ranking and unclassified records

Rank PSCs separately by signed net obligations and distinct awards, ties by code. The PDF shows up to 10 codes with reported amounts and up to 5 by positive award count. The ZIP contains all observed codes and both ranks.

Keep reported four-character alphanumeric PSCs, including historical codes, and show the latest nonblank descriptions in scope. Missing or malformed PSCs remain in the total, unranked.

Reproduce the result

Queried at 2026-11-19T19:30:02+00:00. Rerun the exact SELECT from the ZIP in GETWAB FPDS Query. Import the CSV's PSC column as text to keep leading zeros.

Conclusions

Analyst commentary / static archive sample

What the data shows

DA01 led both measures in this scope: $4.93 billion of an $8.88 billion net and 174 identifiable awards out of 570 across the scope. It is useful to compare both rankings: a category can have high obligations without being especially frequent.

How to use the result

Do not sum the code-level award counts as a unique national total, because awards can appear under different codes across actions. No unusable PSCs were observed in this particular slice, but unclassified actions belong in any scope reconciliation before code-level rankings are interpreted.
