# Methodology

## Source and coverage

FPDS Award actions in GETWAB's FPDS dataset. Actions without a usable signed date or obligation amount are excluded. Queried on November 19, 2026; latest signed date in the market: September 30, 2026. This is not a completeness or refresh date.

## Parameters

Vendor UEI: C47BNA8GM833. Exact reported recipient, not a parent-company or affiliate roll-up.

Market: DA01 (PSC, product or service). Awarding agency: Any. An agency code matches the contracting-office agency, not the funder. The same filters apply to the selected vendor and the market.

Start fiscal year: FY 2025. End fiscal year: FY 2026. Both endpoints are included. Fiscal years are assigned by signed date and run from October 1 to September 30. An open fiscal year is partial.

Layout: Portrait. This changes the page format, not the data.

## Metrics and limits

Net obligations add the signed award-action amounts, including negative adjustments. They are not cash outlays or award ceilings. Actions count reported transactions, not distinct contracts.

Year-over-year change compares adjacent observed, completed fiscal years. Percent change divides the dollar change by positive prior-year net obligations. A missing year is not zero. Display rounding can affect totals by cents.

Signed action obligations are converted to cents before summing. Supplier ranks use net obligations by reported UEI. The table shows the top 15, the selected UEI if outside that group, and a separate unranked missing/invalid UEI bucket.

Net share divides each row's signed net by total market net, including unranked actions. CR1 and CR5 divide the leading one and up to five positive supplier nets by the same total. All shares and ratios are suppressed if market net is not positive; negative adjustments can yield negative shares or ratios above 100%.

The portfolio sums the same award actions by year and awarding agency. It lists the top 12 agency codes, with other and missing codes separate. Concentration describes reported obligations, not the number of bidding firms.

## Reproduce the results

Open SFPR-VEND-COLL-1.sql in the accompanying ZIP (also available as a separate download). Run the labeled SELECT statements one at a time in FPDS Query. Confirm the signed-date and scope filters before comparing the result. Reruns against newly updated FPDS data may differ.

SQL columns ending in _cents store dollars multiplied by 100. Portfolio tuples contain fiscal year, agency code, agency name, net cents and action count.

# Conclusions

Analyst commentary / static archive sample

## What the data shows

The selected entity accounted for $2.50 billion of a $45.75 billion reported market net, about 5.5%. The accompanying market ranking helps distinguish this vendor's role from the total activity in the classification market.

## How to use the result

Up to five leading identified suppliers represented 23.4% of the market net. This concentration is a measure of dollars, not bidder participation, influence or probability of award. Check the buyer breakdown where the selected entity is material, and do not consolidate affiliates unless there is a separate verified analysis.

## About this example

This fixed public sample uses an actual GETWAB report snapshot dated 2026-11-19. The commentary was written for this example without a runtime model. Reusable SQL and supporting tables are provided with an ordered report, not with this preview.
